

Ross Baldick

for contributions to analysis of power system economics

Richard Brown

for contributions to distribution system reliability and risk assessment

Claudio Canizares

for contributions to voltage stability of power systems

William Chisholm

for contributions to extra high voltage transmission line performance assessment

Mo-Yuen Chow

for contributions to diagnostics and control in mechatronics

John Estey

for leadership in development of power system distribution equipment

Leslie Falkingham

for contribution to the development and commercialization of vacuum interrupter technology

Masoud Farzaneh

for leadership in the area of ice-covered insulator flashover mechanisms and development of application guidelines

Avelino Gonzalez

for contributions to intelligent monitoring and diagnostics of power systems

Xiaohong Guan

for contributions to optimization of hydrothermal generation scheduling

Daniel Kirschen

for contributions to analysis of power system economics and power system security

Loi Lei Lai

for contributions to development of computational intelligence techniques to power system applications

Massimo La Scala

for contributions to computationally efficient power system dynamic performance simulation and control

Wei-Jen Lee

for contributions to engineering education and power system analysis

Steven Leeb

for contributions to modeling, design, analysis, and construction of servomechanisms

Carlo Alberto Nucci

for contributions to analysis and modeling of lightning originated phenomena in power systems

Mark O Malley

for contributions to modeling and control of renewable energy on island power systems

Antonio Orlandi

for contributions to high-speed digital systems

Dean Patterson

for contributions to the design of permanent magnet machines and power electronics education

Carlos Portela

for contributions to high voltage engineering for power transmission and distribution

Nagu Srinivas

for contributions to assessment of vulnerability of aged extruded dielectric power cables by direct current testing

Peter Sutherland

for contributions to harmonic analysis in electrical power systems

John Tengdin

for leadership in ethernet local area network based protective relaying and control in electric power substations

Kevin Tomsovic

for contributions to intelligent systems in power engineering

Roland Watkins

for leadership in development of category system for globally classifying performance of data cable
